BGP Tool Hints

Here are some docs about how to build the various BGP tools out there.

Building BGPDUMP

First off, we clone the git repo locally. Go to the place where you normally do your development work (for example, /usr/local/src), and:

```
git clone https://github.com/RIPE-NCC/bgpdump.git
```

Next makes sure we have the libraries and packages we need installed:

```
sudo apt install libz-dev autoheader
```
