

The Peering Database

The <https://www.peeringdb.com/> is a freely available, user-maintained database of networks which take part in the global Internet. It is considered the authoritative source of all information relating to network operators who participate in peering around the world.

The database facilitates the global interconnection of networks at Internet Exchange Points (IXPs), data centres, and other interconnection facilities, and is the first step in making interconnection decisions.

Background

In the early Internet (of the 1990s) there were few network operators and interconnect points around the world that interconnections were relatively straightforward to seek out and implement (in the author's experience anyway). In March 1999 there were 4640 ASNs in the Internet with only 800 providing transit. This compares with today's total exceeding 73000 ASNs and over 10000 ASNs providing transit, never mind that almost every country in the world now has at least one Internet Exchange Point if not a datacentre facilitating commercial interconnects.

In the 1990s establishing new interconnects by attending in major Internet operations meetings (NANOG, RIPE, AfNOG, APRICOT and so on), with network information passed on by word of mouth or email or even by letter!

With the rapid growth of the Internet in the late 1990s and early 2000s, there needed to be a more scalable way for a Network Operator to get their "peering information" out to the global Internet operations community. And hence the PeeringDB was born.

What is the Peering DB

The Peering DB is a repository of the important information that network operators need to determine whether an interconnection is feasible, makes commercial sense, makes technical sense, and is even technically feasible. While the Peering DB website has much more detailed information, the Peering Toolbox is highlighting the key points.

Here are some example entries to show what is possible. The first example (publicly accessible) is of LINX, the London Internet Exchange:

PeeringDB Search here for a network, IX, or facility. efixxx

LINX LON1 Silver Sponsor

Peers: 811 | Connections: 913 | Open Peers: 508 | Total Speed: 39.2T | % with IPv6: 85

Organization LINX
 Also Known As: London Internet Exchange Ltd.
 City: London
 Country: GB
 Continental Region: Europe
 Media Type: Ethernet
 Service Level: Not Disclosed
 Terms: Not Disclosed
 Last Updated: 2020-06-29T07:53:16Z
 Notes: used to be Juniper LAN

 MTU: 1500
 IX-F Member Export URL: Private
 Visibility:
Peers at this Exchange Point

Peer Name	ASN	Speed	Policy
(as) networks	33920	2G	Selective
01 Telecom (01.T)	201933	10G	Open
012 Smile Telecom	9116	10G	Open
012 Smile Telecom	9116	10G	Open
1&1 Versatel Deutschland GmbH	8881	100G	Selective
100 Percent IT	20916	1G	Open
23M GmbH	47447	10G	Open
24Shellia Inc	55061	10G	Open
31173 Services AB	38351	10G	Open
4D Data Centres Ltd	31463	10G	Selective

which shows a screen capture of what is available at their LON1 site, a scrollable list of the participants, how to contact LINX, etc.

The second example below shows that of a AWS (Amazon Web Services), one of the major content networks on the Internet:

PeeringDB Search here for a network, IX, or facility. efixxx

Amazon.com Diamond Sponsor

Organization: Amazon.com
 Also Known As: Amazon Web Services
 Company Website: <https://www.amazon.com>
 ASN: 16509
 IRR as-set/route-set: AS-AMAZON
 Route Server URL:
 Looking Glass URL:
 Network Type: Enterprise
 IPv4 Prefixes: 7900
 IPv6 Prefixes: 2500
 Traffic Levels: Not Disclosed
 Traffic Ratios: Balanced
 Geographic Scope: Global
 Protocols Supported: Unicast IPv4, Multicast, IPv6, Never via route servers
 Last Updated: 2022-03-14T23:48:18Z
 Public Peering Info Updated: 2022-04-27T20:49:30
 Peering Facility Info Updated: 2022-03-28T23:35:40
 Contact Info Updated: 2020-12-01T12:28:55Z
 Notes: AWS Peering: <https://peering.aws/>
 Peering requests:
 When submitting a peering request, please address the specific regional contact listed below for the location of your request (i.e. peering requests for London should use peering-emea@amazon.com while peering requests for Singapore should use peering-apac@amazon.com). This will ensure your request is processed and addressed in a timely fashion. Please do not copy contacts not meant for peering policy in the location of your request.
 Operational issues:
 If you experience connectivity issues to Amazon, please

Public Peering Exchange Points

Exchange	ASN	Speed	RS Peer
AKL-IX (Auckland NZ)	16509	100G	
AMS-IX	16509	600G	
AMS-IX Chicago	16509	100G	
AMS-IX Hong Kong	16509	10G	
AMS-IX Hong Kong	16509	10G	
AMS-IX Mumbai	16509	10G	
AMS-IX Mumbai	16509	10G	
Any2Denver	16509	100G	
Any2West	16509	100G	

Private Peering Facilities

Facility	Country
151 Front Street West Toronto	Canada
165 Halsey Meet-Me Room	United States of America
35 John Street / 290 Front Street West	Canada

This one shows the Public peering and Private peering facilities AWS is present at. So a potential peer can check which locations they share with AWS, and then contact them about peering. The page for AWS contains data about number of prefixes, traffic ratios, etc, plus the IP addressing used at the various public Internet connect points. All this is designed to make it easier for prospective peers to assess and reach out to AWS for peering.

And the final example shows Aereion (formely Telia Carrier), the operator of AS1299, one of the international transit carriers serving the global Internet:

The screenshot shows the PeeringDB interface for organization Twelve99. The organization is identified as Aereion, formerly Telia Carrier, with ASN 1299. It lists various peering facilities, including public exchange points and private facilities in locations like North Kansas City, Omaha, Buffalo, Detroit, Nashville, Tampa, Berlin, and London.

Organization	Aereion
Also Known As	Aereion, Telia Carrier
